(54) MAGNETIC CREAM FOR CLEANING CUTICLE

(57)Abstract:

PURPOSE: To obtain the titled cream having high brightness and saturation, giving excellent feeling to the skin and capable of easily removing dirt substance embedded in a dent such as skin pore, by using a coating foundation agent and magnetic particles coated with a whitening material.

CONSTITUTION: Surface of magnetic particles (preferably having particle diameter of $\leq 80\mu\text{m}$) (composed of metals of Fe, Ni, Co, Mn, Cr, Cu, Ba or rare-earth elements, their alloy or ferrite which is oxide of the above metal) is coated with a white pigment having particle diameter of $\leq 10\mu\text{m}$, preferably $\leq 5\mu\text{m}$ and a refractive index of ≥ 1.6 , preferably ≥ 2.0 (e.g. rutile or anatase titanium oxide or zinc oxide) and the coated magnetic particles are used in combination with a coating foundation agent. An opaque polymer (e.g. polyolefin or polyamide) can be used as the whitening material. The incident light is scattered by the whitening material to obtain a magnetic cream exhibiting an appearance having high whiteness or brightness.
